

SELENIUM WEBDRIVER :

By Anu Radha N [212223230018]

1. Automating Google Search Using Selenium WebDriver:

```
from selenium import webdriver
from selenium.webdriver.common.by import By
from selenium.webdriver.common.keys import Keys
```

```
driver = webdriver.Chrome()
driver.get("https://www.google.com/")
search = driver.find_element(By.ID, "t6d")
search.send_keys("Actor suriya images")
search.send_keys(Keys.ENTER)
```

```
input("Enter to close the browser")
driver.quit()
```

2. Automating Login and Product Price Extraction Using Selenium WebDriver

```
from selenium import webdriver
from selenium.webdriver.common.by import By
from selenium.webdriver.common.keys import Keys
```

```
driver = webdriver.Chrome()
driver.get("https://www.saucedemo.com/")
username = driver.find_element(By.ID, "user-name")
password = driver.find_element(By.NAME, "password")
login = driver.find_element(By.ID, "login-button")
username.send_keys("standard_user")
password.send_keys("secret_sauce")
login.click()
```

```

inventory_items = driver.find_elements(By.CLASS_NAME, "inventory_item_name")
price = driver.find_elements(By.CLASS_NAME, "inventory_item_price")
for i in range(len(inventory_items)):
    print(inventory_items[i].text, ":", price[i].text)

input("Enter to close the browser")
driver.quit()

```

3. Automating Flipkart Login and OTP Verification Using Selenium WebDriver

```

from selenium import webdriver
from selenium.webdriver.common.by import By
from selenium.webdriver.support.ui import WebDriverWait
from selenium.webdriver.support import expected_conditions as EC

driver = webdriver.Chrome()
driver.get("https://www.flipkart.com/")
wait = WebDriverWait(driver, 10)
login = wait.until(EC.presence_of_element_located((By.XPATH, '//a[@title="Login"]')))
driver.execute_script("arguments[0].click();", login)
enter_number = wait.until(EC.presence_of_element_located((By.XPATH,
'//input[@type="number"]')))

enter_number.send_keys("7358591318")
button = wait.until(EC.element_to_be_clickable((By.XPATH, "//button[text()='Continue']")))
button.click()

otp = input("Enter OTP: ")
otp_input = wait.until(lambda driver: driver.find_elements(By.CLASS_NAME, "S1KmoO"))
for i in range(6):
    otp_input[i].send_keys(otp[i])
verify_otp = wait.until(EC.element_to_be_clickable((By.XPATH, "//button[text()='Verify']")))
verify_otp.click()
print("Login Successfully")
input("Enter to close the browser")
driver.quit()

```
